

## NeuroFedora

FOSS and Free and Open (Neuro)Science

NeuroFedora contributors

neuro.fedoraproject.org

## **Open Science**

Everyone should have the freedom to study, modify, and share scientific material<sup>1</sup>.

Scientists, academics, students, researchers, non-scientists, and non-academics should all have access to scientific material—irrespective of social status, location, age, nationality . . . .

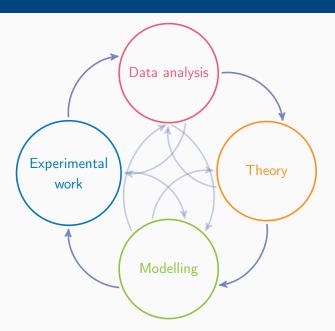

<sup>1</sup>http://opensourceforneuroscience.org/

#### **Neuro Science**

- How the brain functions (physiology)
- How it is structured (anatomy)
- About its chemicals (pharmacology, biochemistry)
- How it processes information (computational)
- About behaviours, and cognition (behavioural, cognitive)

## How: Research Pipeline

## **Basic Workflow**

### Tools of the trade

#### Experimental:

- EEG, ECoG, intracellular and extracellular single and multi neuron recording,
- CT, DOI, MRI, f-MRI, MEG, PET,

#### Data analysis:

- Statistics,
- Machine Learning, Big Data, Deep learning,

#### Theory and modelling:

• Simulators of all kinds,

# Free/Open (neuro) Science

## The ideal, in short:

Free/Open Science:

Everyone should have the freedom to share, study, and modify scientific material.

FOSS:

Everyone should have the freedom to share, study, and modify software<sup>5</sup>.

Free/Open Science includes and relies heavily on Free/Open Source Software (FOSS).

<sup>&</sup>lt;sup>2</sup>Free software foundation

#### So we strive to use more and more FOSS

NEUROVIEW | VOLUME 96, ISSUE 5, P964-965, DECEMBER 06, 2017

A Commitment to Open Source in Neuroscience

Open Access ◆ DOI: https://doi.org/10.1016/j.neuron.2017.10.013 ◆

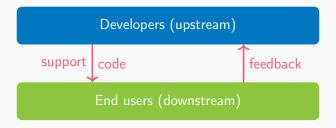

<sup>&</sup>lt;sup>6</sup>Open source for neuroscience

NeuroFedora: why, how, what?

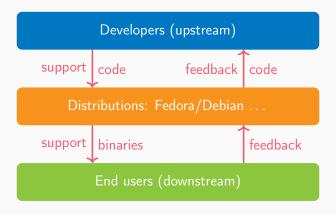

## Neuroscience community: highly multidisciplinary

- various specialities: biologists, mathematicians, physicists, chemists, psychologists, ...,
- small proportion of trained software developers

## FOSS: Developers and users

## Distributions liaison between developers and users

## Distributions, like Fedora, are in a unique position:

- liaison between upstream and users
- have the infrastructure
- follow best practices in software development
- constantly work on community development
- learn from one another—train while working
- disseminate information to end-users

#### NeuroFedora:

### Primary goal:

 Provide a ready to use, integrated FOSS platform for neuroscientists<sup>7</sup>.

## Secondary/collateral goals:

- help improve the standard and maintenance of tools
- help users develop software development skills
- make neuroscience accessible to non-specialists

<sup>&</sup>lt;sup>7</sup>Researchers, academics, hobbyists, anyone!

NeuroFedora: What we offer?

## Comp-Neuro Lab

- An OS to enable neuroscience
- Contains a plethora of computational neuroscience tools
- Packed with analysis and general productivity tools
- Integrated with GNOME

## **Comp-Neuro Container**

- A ready-to-use comp-neuro container
- Can be used with Podman/Docker
- Can be obtained from standard public container image registries like Docker Hub

https://docs.fedoraproject.org/en-US/neurofedora/containers/

https://podman.io/

https://www.docker.com/

## NeuroFedora: How can you help?

- Packaging and maintenance
- QA (testing)
- File bugs, help upstream packages
- Improve Documentation
- Help other users
- Spread the word!

https://docs.fedoraproject.org/en-US/neurofedora/contributing/

#### NeuroFedora: current metrics

- Will be 3 years old, in September 2021!8,
- 30 volunteer contributors
- software:
  - ~190 tools (packages) ready to install<sup>9</sup>:
    - NeuroMLlite, pyNeuroML, NetPyNE, Neuron, InterViews, NEST, Genesis, Brian (v1 and v2), Moose, python-libNeuroML, PyLEMS, PyNWB, . . .
  - ~200 in queue<sup>10</sup>.
    - EDEN, NeuroMynerva, FlyBrainLab, GeNN, ...

<sup>8</sup> in its second iteration
